

Part with excess ...

polystar® Continuous Band Sealer Type 350 DSM-TE-SV

Detaches excess foil and seals in one operation -
that is how polybag sealing should be today!

Technology - that inspires: Continuous band sealers with cutting device

Rotating cutting knife

Is activated by a micro-switch - the cutting device only works when foils are actually fed into the machine.

Your advantage: less wear on the cutting knives!

Retractable cutting device

When the cutting device is not in use it can be easily retracted by hand.

Your advantage: only one machine needed for various types of application!

Reliable continuous sealing technology

- Feed-through speed: 5.5 meters/minute, alternatively available with a speed of 10 meters/minute.
- Bag holding device: Bags with a weight of up to 500 g can be sealed without the help of roller conveyors or conveyor belts.
- Automatic pressure: The spring-supported pressure bars adjust automatically to the thickness of the foil. This guarantees consistent sealing results.
- Film thickness: Thermoplastic films (e.g. PE-film) up to max. 2 x 0.30 mm.
- Width of sealing seam: 4 mm

**Test our polystar[®] continuous band sealers with their proven accessories.
Do not delay - ask for further product information today.**
